TECHNICAL SKILLS

BACK END DEVELOPMENT: NodeJs, Express, NextJs, C++ , Java, Python

FRONT END DEVELOPMENT: NextJs, ReatJs, Framer Motion, Recoil, Context API, Javascript, Tailwind, Bootstrap, Html, CSS

MISCELLANEOUS: Amazon AWS, SQL, Prisma, DSA, MongoDB, Cyber Security

Libraries and Tools: Postman, Docker, Supabase, Firebase Wordpress, Pandas, Numpy, Git

EDUCATION

MIT World Peace University
BTech, Computer Science Engineering
GPA: 8.67

Pune, Maharashtra, India
April, 2021 - 2025

EXPERIENCE

Video Editing

Freelancing

Jan 2022 - August 2023

- I have completed eight internships and some freelancing projects on video editing and graphic design.
- I have used software such as Final Cut Pro, Video Scribe, Adobe After Effects, Adobe Photoshop, Figma, and Canva according to the client's demands.
- While working on these projects, I was also learning web development and making projects.

Goldman Sachs

Software Engineering Virtual Experience Program On Forage

Sep 2023 - Sep 2023

- I completed a job simulation as a Goldman Sachs governance analyst responsible for assessing IT security and suggesting improvements.
- Identified that the company was using an outdated password hashing algorithm by cracking passwords using Hashcat.

PROJECTS

- **Portfolio**, I have developed a portfolio website utilizing React for the front end and Node.js with Express for the backend. For styling, I employed Tailwind CSS, and incorporated 3Js and Framer for advanced animations and interactions. The front and back ends are connected using Axios. Additionally, I integrated EmailJS to facilitate email notifications from visitors. The site is deployed on Vercel, and I have secured a custom domain from .tech. [GitHub](#)
- **Mini Projects**, While learning React, I have built several mini projects including a **password generator, to-do app, notepad, expense tracker, and Gmail activity manager**. I aimed to create something unique with a great UI and optimized the projects as much as possible by using various hooks to reduce rendering. [Github](#)
- **Freelancing**, As a freelancer, I have seen that websites like Fiver, Freelancer, and Upwork are not very user-friendly for Indians, and they all work in dollars, which we can withdraw using PayPal, but all of them charge a high commission in the era of UPI. So I have built a MERN Stack website to solve this problem.
- **Payment Website(MERN Stack)**, I have used all the concepts I had learned till that date, like middlewares, routes, async-await, express, mongoose, reactjs, tailwind, react, cors, axios, and many more, in this single project. [GitHub](#)

CERTIFICATION

- **Full Stack Development** with DevOps, System Design, Open Source by Harkirat singh
- **AWS on Udemy** - AWS EC2 : AWS Certified Solutions Architect - Associate by Mohammed Asif Khan
- **Alchemy Javascript**
- **SQL on udemy** - Mastering SQL using Postgresql By Durga Viswanatha Raju Gadiraju
- **Python on Udemy** - The Complete Python Bootcamp From Zero to Hero in Python
